EDUCATION

Boston University – Boston, MA **Expected Spring 2028**
Master of Science in Computer Science and Artificial Intelligence
University of Massachusetts Lowell – Lowell, MA **Graduated 2025**
Bachelor of Science in Computer Science, Minor in Mathematics

TECHNICAL SKILLS

Programming & Scripting Languages: C, C++, C#, Java, Python, JavaScript, HTML, CSS
Software Development: OOP, Data Structures & Algorithms, Debugging, Software Testing, Agile/Scrum, Technical Documentation
Tools & Platforms: Git, Visual Studio, Unity, draw.io, Slack, MS Office
Operating Systems: Linux, RHEL, Ubuntu, Windows, Chrome

WORK EXPERIENCE

Handshake AI Fellowship **Remote**
AI Trainer - AI Expert (Contract) Fall 2026

- Developed and evaluated AI-focused prompts to assess the performance of large language models (LLMs).
- Analyzed LLM outputs for technical accuracy, clarity, and depth in artificial intelligence topics.
- Provided expert review and feedback to improve model understanding of complex AI concepts
- Conducted independent research to support prompt development and evaluation tasks.

DePaula & Clark, Inc. **New York, NY**
Internship Summers 2024-2025

- Collaborated with account managers to automate reconciliation workflows using cloud-based financial platforms, including QuickBooks, Webgility, and Shopify.
- Supported API-driven integrations between financial systems by troubleshooting mapping issues, validating data accuracy, and documenting workflow processes.
- Aggregated data from financial platforms to prepare client summaries of sales, expenses, balances, and transactions.

TECHNICAL PROJECTS/RESEARCH

Bolo – AI Language Learning App Fall 2026

- Built an AI language learning app with React Native, Expo, and TypeScript, featuring guided lessons across six languages.
- Integrated Stream Vision Agents with OpenAI Realtime for conversational voice tutoring, using lesson-specific prompts and live captions to guide speaking practice.
- Implemented Clerk authentication and server-side API routes to securely issue Stream tokens and manage AI lesson sessions.
- Persisted lesson completion, XP, and language preferences with Zustand and AsyncStorage to retain progress across sessions.

Self-Driving Car Decision-Making AI Model Spring 2025

- Designed and developed an AI-based decision-making system for autonomous vehicles using a Naïve Bayes classifier and a custom neural network.
- Trained and evaluated models using real-world vehicle and sensor-based data from the Kaggle Self-Driving Cars dataset.
- Assessed model performance using accuracy, precision, recall, F1-score, and loss/accuracy curves to monitor overfitting.

FlashCars – Educational Game Fall 2024

- Led a team of four in developing an educational racing game in Unity using C#, where students answer subject-based questions to progress through a race.
- Co-wrote a detailed Software Requirements Specification outlining functional requirements, technical requirements, user scenarios, and system behavior.
- Collaborated with teammates to divide tasks, test features, and refine the user experience for elementary school students.
